LifeSafety Power® Expands Integration Support for Axis, Adding New Controllers to the Unified Power Solutions® Product Line

More ways to unify power with additional options for integrating access controller hardware builds into LSP enclosures.

Phoenix, AZ, September 24, 2025— LifeSafety Power (LSP) continues to expand its FlexPower® Unified Power Solutions® partnership with Axis, adding support for additional controllers for complete integration of access control boards and power modules into a single enclosure.

Unified Power Solutions for Axis integrate system power, lock power and Axis controllers into one LifeSafety Power wall mount enclosure. The controller integrations include the A1210/1610/1710/1810/1710-B/1810-B series. Multiple LifeSafety Power® devices can be connected in the access control power systems, which are capable of controlling up to 8 doors.

Unified Power Solutions allow security integrators to take advantage of a single chassis engineered to coordinate electrical and mechanical integration, providing faster, time-saving installations, repeatable designs and greater service efficiencies for Axis installations. A removable back plate controller wiring configuration and expansion slots are ready for easy installation of additional power distribution modules and components. The preconnected power section further saves configuration time and an AC disconnect point makes servicing straightforward.

Available in options of single (12 or 24V DC) or dual voltage operation (12 and 24V DC), each LSP output is protected against electrical surges caused by lightening or transients on the external wiring (SurgeShield). LSP control outputs are field-selectable for available DC voltages, either failsafe or fail secure operation with fire alarm interface.

The enclosure also includes space for LifeSafety Power NetLink® Network Connectivity modules for intelligent managed power. NetLink technology enables detailed power health reporting, remote troubleshooting and battery testing, email/SNMP alerts and other proactive and predictive data.

Unified Power Solutions include a growing list of access control integrated power options. LifeSafety Power has over 15 OEM partnerships covering a wide range of component manufacturers.

Invented by LifeSafety Power in 2010, FlexPower Unified Power eliminates the use of three separate enclosures formerly deployed for access control installations. It requires less wall space, wiring and only one AC drop, resulting in up to 50 percent space savings and as much as 40 percent installation savings.

About LifeSafety Power*

LifeSafety Power is a premier manufacturer of intelligent power management systems for physical security and access control and the chosen standard for many Fortune 500 companies around the world.

LifeSafety Power has created new categories of access control power including intelligent power solutions which increase the reliability of the security infrastructure, while prewired components decrease labor and yield more consistent installations across an enterprise. These innovations have led to LifeSafety Power becoming the power solution of choice for leading access control panel OEMs throughout the security industry.

LifeSafety Power has won numerous industry awards for product design and innovation, including the prestigious Security Industry Association New Product Showcase, Security Today's 2025 GOVIES Government Security Award, the 2023 Secure Campus Award from Campus Security & Life Safety magazine for BitStream™, SSI Most Valuable Product and Security Today's 2021 New Product of the Year.

LifeSafety Power is part of the ASSA ABLOY Group and is headquartered in Phoenix, Arizona. For more information, please visit LifeSafety Power or call (888) 577-2898.
