DESCRIPTION

The FlexPower FPX200A/75-A8PD8E1 is a mixed-voltage AC&DC output power supply specifically designed for the Access Control & CCTV segments of the lifesafety industry. The unit is configured in a painted, steel, locking enclosure with tamper switch.

The A8 provides visual indication of AC output voltage for each zone and overcurrent protection using 2.5A PTCs providing Class 2 Power Limited outputs.

A total of 8 auxiliary class II DC outputs are provided with each output being selectable for constant output or fire disconnect.

FPX systems are configured in a 14x12x4.5” enclosure with lock and tamper switch.

BENEFITS

- Agency Listed for Access Control, Fire, Security, CCTV, and Mass Notification
- FlexPower® Feature Set
  - SureCharge: Microprocessor controlled battery charging
  - PowerCom: Power supply programming / monitoring software
  - VSelect: Installer selectable output voltage
  - TruWatt: Delivers twice the current at 12V than at 24V
  - PartHealth: Intelligent battery charging and battery state monitoring
  - FlexConnect: Dual voltage bus / pre-wired accessory board interconnects
  - Reliability+: Full fault protection / high efficiency / fiberglass pcb
  - GreenSmart: RoHS compliant, lead free, energy efficient design
  - DataLink: Network communication interface

- System Features
  - Fully modular power management system
  - Multiple outputs for system power, direct lock control and accessory power distribution
  - Expansion options include more lock outputs and remote mgmt
  - Fire alarm interface for egress lock control (FAI)
  - Configurable fail-safe / fail-secure modes of operation
  - Comprehensive fault detection and reporting including optional earth ground and battery presence
  - AC and System fault output relays can be delayed via PowerCom s/w
  - Microprocessor charging optimizes battery health

- Lifetime Warranty

AGENCY LISTINGS

**USA**
- UL 294
- UL 1481
- UL 603
- UL 2044
- UL 864
- UL 2572
- UL 1076

**Canada**
- ULC S318
- ULC S319
- ULC S527
- CSA C22.2 #107.1
- CSA S60950
- Ontario ESA
**FLEXPOWER® STANDARD FEATURES**

**SureCharge** The microprocessor controlled charging process used by the FlexPower power supply guarantees both proper charging current for the battery and fastest charge time. The constant current charger provides a linear, predictable charge time for any lead acid, gel battery set from 4 to 80 amp-hours (based on charger rating) without stress or damage to the battery.

**PowerCom/PowerCom-USB** LifeSafety Power’s proprietary software interface for communication with FlexPower equipment through a DATALINK or USB connection. PowerCom is used for power supply monitoring, programming, and reporting.

The NL1 DATALINK network module enhances PowerCom’s capability with remote diagnostics, battery management, trouble / service email alerts via LAN/WAN, and remote off/on reset control.

The DL1 USB cable and a computer laptop USB connection, enables PowerCom-USB to be used by service personnel for onsite power supply programming and system diagnostic evaluation.

**VSelect** One single switch for configuring the output between 12 and 24VDC eliminates field errors and allows for the reduction and simplification of service inventory by eliminating the necessity of stocking units in each voltage.

**TruWatt** Output power capability of the power supply remains constant regardless of the output voltage setting. For example, a FlexPower 250 watt supply will provide 10 amps at 24VDC and 20 amps at 12VDC, allowing the same number of locking devices to be used at either the 12 or 24V setting.

**FlexConnect** The FlexPower series provides a prewired interconnection system between the power supply and accessory boards of the power system that introduces the concept of a dual voltage bus structure throughout all system modules and eliminates intermodule wiring by the field installer. Field upgrading or expansion is as simple as using common mounting footprints, predrilled mounting holes, snap-in standoffs, and pluggable wires to add additional system capability or capacity when needed, all without restrictive agency listing issues.

**Reliability** All power supplies within the FlexPower system are fully fault protected and feature fiberglass printed circuit boards rather than paper-based to protect the electronics from water and other corrosive elements found in industrial settings. High efficiency power supply design promotes low heat generation leading to a longer service life.

**Greensmart** All members of the FlexPower family are RoHs compliant, lead-free, and meet the latest state, federal and European requirements for energy efficiency.

**DataLink - Smart Power Management Communication Interface**

Monitor, program, control, and report key power supply functions by computer or local/wide area network using a browser interface or LifeSafety Power’s PowerCom® remote management software.

Power supply network connection requires the optional NL1 network module. Power supply computer connection requires the optional DL1 USB cable.

### FAULT DETECTION AND REPORTING

The comprehensive fault detection and reporting mechanism of the FPO series provides for both local and remote fault reporting.

On-board visual indicators are provided to give immediate installer feedback. Independent form C relay contacts are provided to report AC and system fault conditions to remote or auxiliary equipment. A door tamper switch is included.

**Detected Fault Conditions:**

- **AC Power**
  - AC loss, AC low
- **DC Power and System**
  - Abnormal or loss of power supply operation
  - Over current, over temperature condition
  - DC output high, low
  - Battery Presence, Earth Ground (user optional)
  - Reversal battery condition, blown fuse or loss of output voltage on selected accessory boards (detected on the power supply)

### FIRE ALARM INTERFACE (FAI)

- **Activation Methods**
  - DC voltage: 9 to 33VDC, 3 to 15mA
  - Dry contact NO/NC
- **Latch Enable: NC contact set or switch (typically for Canadian use)**

### POWER DISTRIBUTION MODULE (A8, A8P)

- **Eight power distribution outputs Individually programmable to a continuous output drawn from either buss 1 or buss 2, typically used to program an output for either 24 or 28VAC**
  - **A8** 3A fused per output
  - **A8P** 2.5A class 2, power limited per output
- **AC Presence: Green LED per output**
- **Removable terminals: accepts #14 to #24 AWG**

### POWER DISTRIBUTION MODULE (D8, D8P)

- **Eight power distribution outputs Individually programmable to a continuous output drawn from either buss 1 or buss 2, typically used to program an output for either 12 or 24VDC**
  - **D8** 3A fused per output
  - **D8P** 2.5A class 2, power limited per output
- **DC Presence: Green LED per output**
- **Removable terminals: accepts #14 to #24 AWG**
