For immediate release

LifeSafety Power® Adds Digital Monitoring Products (DCLASS™) to its Award-Winning and Expanding Line of FlexPower® Unified Power Solutions

Mundelein, IL – June 1, 2018—LifeSafety Power® Inc., the industry creator of intelligent networking solutions that assess the security infrastructure's power status in real time, has expanded its flagship, modular FlexPower Unified Power Solutions to include DCLASS™, featuring integration with Digital Monitoring Products, Springfield, Mo.

FlexPower DCLASS™ supports two to 18 doors in single- and dual-voltages and combines with DMP's 734/734N Wiegand Interface Modules, offering turnkey mechanical and electrical integration of power, access control hardware and lock power in a certified UL/cUL enclosure.

Traditionally, access control integrators would need three separate cabinets for system power, lock power and access hardware, increasing the footprint and job costs due to multiple AC drops and inter-cabinet wiring. With DCLASS, security installers can take advantage of a single chassis design-engineered to coordinate electrical and mechanical integration. Factory pre-wired power section saves configuration time and the removable back plate further simplifies controller wiring.

The modularity of FlexPower and DCLASS™ provide the versatility to create an unlimited number of system configurations and specification possibilities. DCLASS™ is ready to add networked monitoring capabilities for intelligent data collection, battery management and other managed power services critical to a dealer's business today.

"A lot of our dealers have told us they like using LifeSafety Power supplies and enclosures," said Adam Kinder, product manager for DMP Access Control. "In combination with our controllers," he added, "it's a solution that requires no modification."

"Being able to expand our modular solutions to incorporate the popular DMP access control product line is important to LifeSafety Power and our drive to provide flexible, widely deployed solutions to market," said Larry Ye, president and chief executive officer.
